SUMMARY

Systems Engineer and Frontend Developer with about 3 years of professional experience building and modernizing enterprise web applications with Angular and TypeScript. Experienced in migrating legacy Angular applications to current versions, building internal tools for logistics operations, and integrating with REST APIs in .NET Core and NestJS. Hands-on with Docker, CI/CD with GitHub Actions, and E2E testing with Playwright. Based in Honduras (UTC-6), with full overlap with US business hours.

TECHNICAL SKILLS

Frontend: Angular (v9–v21), TypeScript, JavaScript (ES6+), RxJS, Angular Signals, Reactive Forms, Angular Material, HTML5, CSS3

Backend & Data: Node.js, NestJS, .NET Core (C#), REST APIs, JWT authentication, Sequelize, SQL (MySQL, PostgreSQL, SQLite)

Testing: Playwright (E2E), Karma / Jasmine (unit testing), Postman

DevOps & Tools: Docker, Docker Compose, Nginx, GitHub Actions (CI/CD), AWS S3, Git, GitHub

Mobile: Android (Java), .NET MAUI (C# / XAML)

Methodologies: Scrum, Agile

PROFESSIONAL EXPERIENCE

Systems Developer – Frontend

Apr 2024 – Present

Grupo Vesta · Logistics and supply chain solutions

- Migrated the **Control Carrier Tower (CCT)** shipment-tracking platform from **Angular 11 to Angular 21**, consolidating duplicated views and components and removing obsolete legacy flows to improve maintainability.
- Migrated the internal **Project Management System** to **Angular 21**, restructuring it into modular components, removing duplicated code, and supporting Excel report generation with ExcelJS.
- Built the **Personnel Actions portal** (Angular 9, Metro UI, jsPDF) that digitized internal HR requests with electronic signatures, approval workflows, and PDF document generation.
- Developed the **Daily Cutoff module** of the Logistics Impact Analysis system (Angular 11), with dynamic grids to audit freight costs across four route legs: origin, transit, border, and destination.
- Containerized Angular applications with **Docker and Nginx** and set up **GitHub Actions** pipelines that build the app and run **Playwright** E2E tests on every pull request.
- Developed mobile apps: an **Android (Java)** warehouse app with barcode scanning to register shipping documents in real time (SQLite, REST APIs), and an executive **.NET MAUI** app to monitor SLAs and project KPIs.
- Integrated Angular frontends with **.NET Core REST APIs**, working in Scrum sprints.

Full Stack Developer

Sep 2023 – Feb 2024

MoviText · Bulk messaging SaaS platform

- Developed the self-service **bulk SMS web portal in Angular**, using lazy-loaded modules to improve initial load time.
- Built complex **reactive forms** with real-time asynchronous validation for customer data.
- Developed REST endpoints with **NestJS and Sequelize** using JWT authentication, ran local services and database with **Docker Compose**, and integrated **AWS S3** for file storage.
- Contributed frontend unit tests with **Karma and Jasmine**.

EDUCATION

B.S. in Systems Engineering – National Autonomous University of Honduras (UNAH) **2025**

LANGUAGES

Spanish: Native · **English:** Intermediate (B1+) – strong technical reading and written communication
